Experience

Mobile App Developer Intern– Humanity Founders September 2026 – Present

Internship

- Developed a real-time admin-to-user communication module in Flutter using WebSocket, enabling direct two-way interaction for an application with 5,000+ users, with automatic reconnection, heartbeat handling, and error recovery and a React.js web platform.
- Designed and built responsive Flutter and Dart UI features, including chat interfaces, message status indicators, and notification components, integrated with Bloc state management and REST APIs
- Optimized app performance and scalability by managing connection lifecycles, minimizing widget rebuilds, and reducing unnecessary network calls, while collaborating with backend and design teams in an Agile environment.

Flutter Developer – OnitIndia April 2026 – July 2026

Internship

- Contributed to a production Flutter app with **100+ Google Play Store downloads** and a React.js web platform.
- Improved Flutter app performance by **15%** through API integration, caching, debugging, testing, and UI optimizations.
- Developed and maintained features across **Flutter, React.js, and NestJS**, implementing authentication, animations, responsive UI, and backend API integrations.
- Converted Figma designs into production-ready interfaces and contributed to **HLD/LLD documentation, testing, deployment, bug fixes, and production releases**.

AI Engineer – amasQIS.ai April 2025 – September 2025

Internship

- Annotated, curated, and quality-checked **3,000+ images** for an **AI-based worker safety system**, labeling PPE classes and negative cases to improve model accuracy.
- Built and utilized a Linux-based (WSL) script to test feature compatibility across **Windows and Linux environments**, helping ensure smooth **cross-platform integration.**
- Built **frontend UI development** using **Vite.js, Tailwind CSS and Figma**, and evaluated **LLM (Qwen via Ollama)** and **TTS models** for virtual AI projects.

Technical Skills

Languages: C++, Python, JavaScript, Dart
Frameworks: Flutter, React.js, Node.js, React Native, FastAPI, NestJS
Backend & APIs: REST APIs, PostgreSQL, MongoDB, JWT, Authentication
Testing & Security: Postman, Swagger, Locust, MobSF, Manual Testing
Tools: Git, GitHub, Docker, Figma
Other: Data Structures & Algorithms, DBMS, System Design

Projects

Myntra HackerRamp Project GitHub

- Designed and implemented a **feature-rich shopping platform** incorporating **Virtual Try-On, Pair Finder, and Modista (personal stylist bot).**
- Boosted user engagement with **Trend-Centric Recommendations, Weekly Quizzes, and a carbon footprint tracker**, contributing to increased sales and profitability.
- **Tech Stack:** Flutter, Firebase, Python

Holographic Microplastic Image Classification GitHub | Live Demo

- Engineered a **CNN-based classification system**, leveraging **digital holography** to categorize microplastic particles, improving accuracy in automatic micro-object classification by **15%** and reducing manual review time.
- Built an **interactive visualization interface** with **Streamlit**, improving research accessibility.
- **Tech Stack:** HTML, CSS, Python, APIs, Streamlit

Education

Vellore Institute of Technology, Bhopal 2023 – 2027

B.Tech in Computer Science and Engineering (AI-ML)

Achievements

- **Finalist**, Smart India Hackathon 2024 Internal Round, selected from **369 teams**, achieving a spot in the **Top 50.**
- Advanced to **Round 2** in Myntra HackerRamp WeForShe 2024 among **29,000+ participants.**
- Secured **8th place** in Lakecity Hackathon 2024; Role: **Frontend Developer.**
- Cleared all internal rounds of **Smart India Hackathon (SIH)**, for consecutive **2 years** from November 2023 to 2024.
